1300L Pump Chamber

SKU: PC-SM

The 1300L pump chamber is ideal for large whole-house domestic or light commercial installations, and consists of a high-quality polyethylene tank ideal for collecting sewage for low pressure sewer applications. These chambers are certified and traffic rated.

A positive displacement submersible grinder pump installed in the chamber will grind common sewage into a slurry, then move it on to a low-pressure sewer main or other suitable outlet, depending on the application.

The pump is controlled with a level transducer which is mounted inside the chamber. A timer can also be added to the pump controller, if a timed pump out is needed. A high-level alarm is installed to provide an early warning of any pump problem.

Unique Features:

- Concrete ballast for high-water table situations.
- Top-mount lifting eyes for safer installation.
- Unique-shaped base to reduce time on install.
- Fully assembled saves time and increases productivity.
- Trafficable lid option available for driveway installations.

Pump Specs: 1.1kW, 10.4 amps, 56m total dynamic head, 50L/min max flow

Optimal pumping range:
28L/min @ 50m head

Pump Chamber dimensions:

1200mm W x 1200mm L
2070mm H
